

CMX Snow Climatology - January

KCMX- January (1974-2008)

Ceilings in Snow

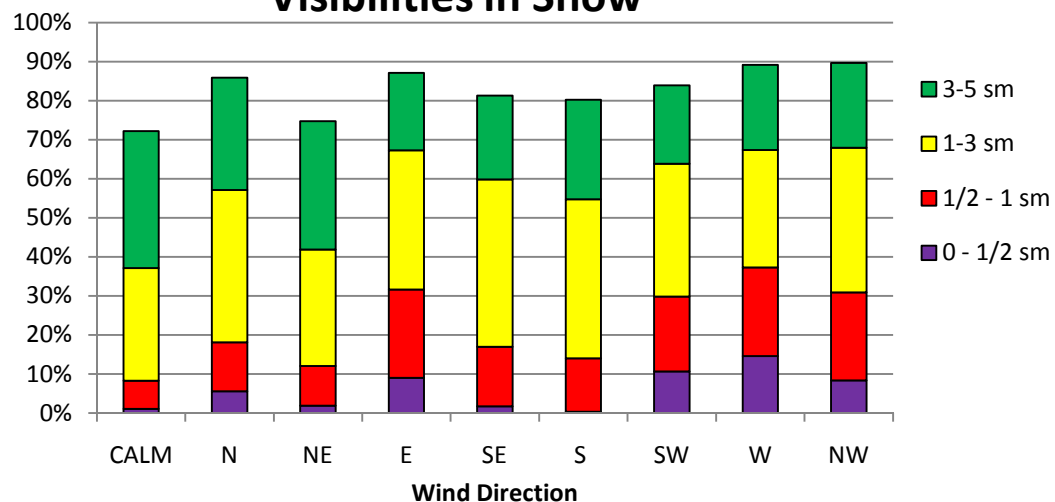

Ceilings:

Majority of ceilings low MVFR (1000-2000 ft). Given an E wind a nearly same percentage are also IFR (500 – 1000 ft).

Highest percentage of VLIFR ceilings (less than 200 ft) occur with an E wind.

KCMX- January (1974-2008)

Visibilities in Snow

Visibilities:

Majority of visibilities are IFR (1 - 3 miles) or LIFR (½ mile or ¾ mile).

Given a W or NW wind, nearly 70 percent of visibilities are IFR or LIFR.

NE winds have the highest percentage of MVFR visibilities (3 – 5 miles).
